

Hi,

I'm Eman

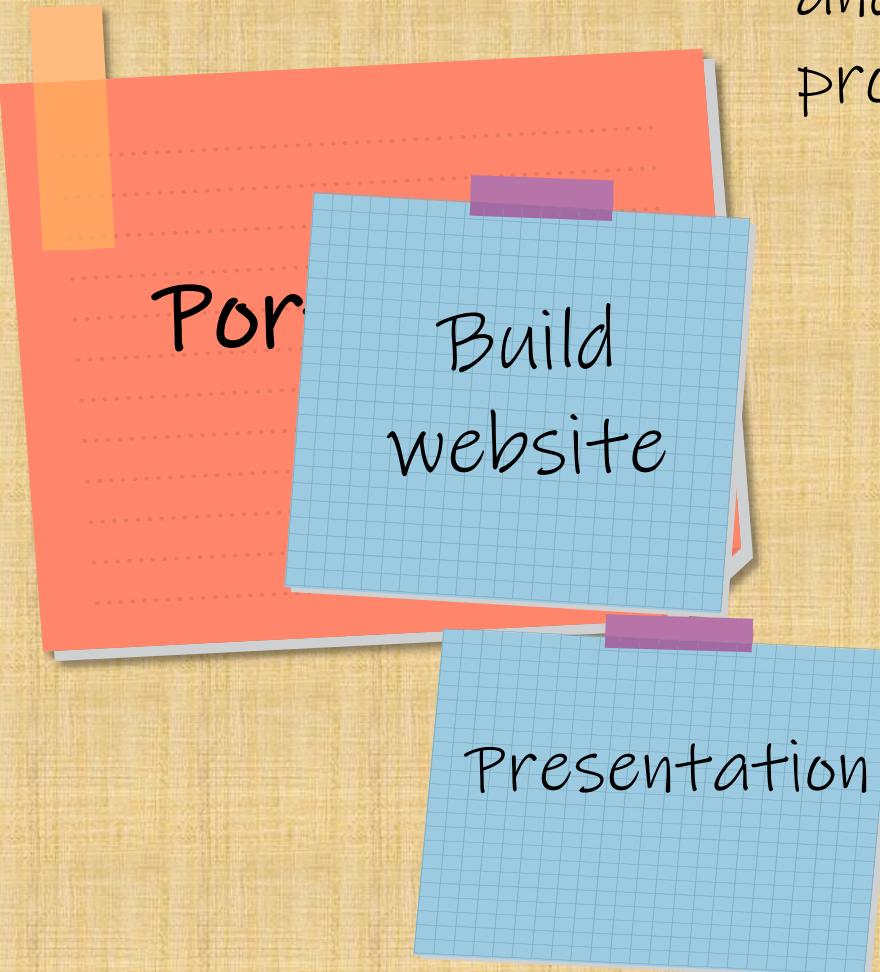

I'm going to walk you through my journey
of building my portfolio website.

step by step

Agile Methodology

Breaking down the task into deliverables and adding it to the product backlog.

User Story

As a **recruiter**, I want to be able to see a **list of skills** of the web developer, so that I can **match** them with the position description.

First backlog item is described as user stories

As a recruiter, I want to see a **sample of the projects** of the web developer so that I can show them to my clients.

User Story

As a recruiter , I want to be able to **contact** the candidate through email or phone , so that I can get in touch with him.

As a recruiter/employer, I want to **see the contact details** of the developer , so that I can get intouch with him/her.

User Story

As a potential employer, I want to know about the web developer so that I can decide if their personality fits in the team .

As a potential employer, I want to see a list of the technical capabilities (technical tools, e.g. CSS) that the web developer knows, so that I can decide that their knowledge meets the requirements.

Dimensions: iPhone 6/7/8 Plus ▾ 414 x 736 79% ▾ No throttling ▾

The mobile view shows the contact form on a screen with dimensions 414 x 736 at 79% zoom. The interface is identical to the desktop version, featuring three input fields for Name, Email, and Message, followed by a green 'Send' button and social media links at the bottom.

Dimensions: iPad ▾ 768 x 1024 50% ▾ No throttling ▾

The mobile view shows the contact form on a screen with dimensions 768 x 1024 at 50% zoom. The layout is consistent with the iPhone view, though the text size appears slightly larger due to the higher resolution.

A little bit about myself.

Hello there I am Eman Youssef and I am very passionate about seeing my imaginations come to life. I'm constantly learning new things every day and using them to bring happiness to those around me. I love connecting with like minded people. I am motivated and unafraid of sharing my ideas with the world. I'm a self-taught designer and have learned web development ,automated testing , Python and Graphical design by attending workshops, reading blogs, and applying these to projects in my spare time. I am a big-picture thinker and enjoy working on products end to end, from ideation all the way to development.

Snake Game

The Classical Arcade Game using Python

March 2021 - **Internet Connection**

Using Python and selenium to check Internet connection speed and tweet if the speed is slow

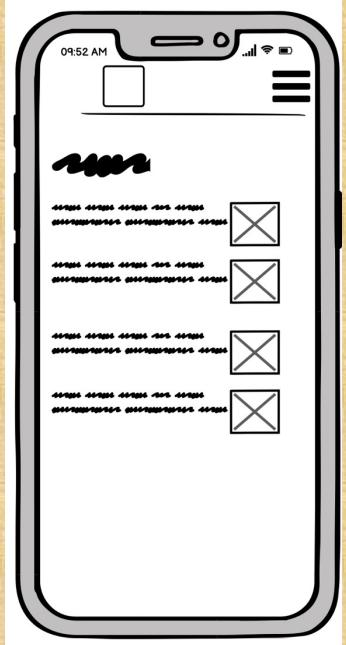

May 2021 - **Classical Snake Game**

Python Code

By using the knowledge about Object Oriented Programming as well as how to use the turtle module in python and watching an online course I managed to build the famous snake game. Snake game is one of the most famous mobile games and it is used to be one of my favorite games way back when I had my very first Nokia mobile phone. I remember spending hours and hours playing it at night when I can't go to sleep. Of course compared to the iPhone today it is very simple but still super addictive. The code uses the turtle module to create a moving object(snake) and control it using keyboard, and there is another object which you try to control the snake to get to touch it, and when you did the snake gets taller and you score and if any collision with the walls or the snake's tail happened the game restarts. The code keeps track of the high score and stores it in an external file.
